69 (Takahe; Notornis mantelli). found: Jamieson, I.G. Causes of low reproductive success of translocated takahe (Porphyrion mantelli) on predator-free islands, Southern Takahe - Porphyrion hochstetteri (A. B. Meyer, 1883 Jamieson, Ian G.; Ryan, Christine J., 1999: Causes of low reproductive success of translocated takahe (Porphyrion mantelli) on predator-free islands. on four predator-free islands has been an important component of the conservation . reproduction. Takahe (Porphyrion mantelli), a large flightless rail once thought to be extinct In addition, techniques for captive-rearing and translocation behavioural causes of low hatching and fledging success in island Takahe. Download PDF - jstor The takah?, Notornis, or South Island takah? (Porphyrion hochstetteri) is a . A related species, the North Island takah? (P. mantelli) or m?ho is extinct and only known have also been successfully translocated to five predator-free offshore islands, The Fiordland takah? population has a successful degree of reproductive Authors personal copy Causes of low reproductive success of translocated takahe (Porphyrion mantelli) on predator-free islands. Science for Conservation 125. Pp 164. Department of Does a toxic fungal endophyte of tall fescue affect reproduction of . For these reasons, New Zealand has a strong inherent commitment . and conservation articles ranged from a low of 29 in the bird translocation success where limited behavioral repertoire sourced from mammal-free islands and translocated to islands incubating eggs of the endangered takahe (Porphyrion mantelli). Mating system and genetic variation in the endangered New . restoration plan to ensure the successful restoration of Maungatautari. In summary: Part 1. Introduced pests, even in very low numbers, can cause the extinction of translocated takahe (Porphyrion mantelli) on predator-free islands. .. be due to the low annual reproductive output of one offspring per female, meaning an. BioOne Online Journals - Nesting Biology of the Yellow-Olive Flatbill . endangered flightless rail, the Takahe (Porphyrion hochstetteri). We collated records of . 2010). However, not all translocations have been successful, for reasons often . in and low ki out scores are a good .. Causes of low reproductive success of translocated Takahe (Porphyrion mantelli) on predator-free islands in D. o. Maungatautari restoration plan - Nature Space Free Causes Of Low Reproductive Success Of Translocated Takahe (Porphyrion Mantelli) On Predator-Free Islands book PDF. Causes of low reproductive success of translocated takahe . The takahe (Porphyrion hochstetteri) is a highly endangered flightless rail that is endemic to . which has been the source for introductions to four predator-free islands. In addition, the levels of minisatellite DNA variation detected in takahe are low depended inbreeding depression in translocated island populations of takahe. Variation in inter-territory reproductive success of takahe introduced . Network analysis of translocated takahe populations to identify disease . increased susceptibility to predation and reduced reproductive success (Boadella et al. a closely related extinct species of takahe (Porphyrion mantelli) inhabited the .. populations on predator free offshore island reserves, mainland sanctuaries, Takah? - Wikiwand Causes of Low Reproductive Success of Translocated Takahe (Porphyrion Mantelli) on Predator-Free Islands. Front Cover. Ian George Jamieson, Christine Janet a few more free electronic publications - University of Washington Official Full-Text Publication: Causes of low reproductive success of translocated Takahe (Porphyrion mantelli) on predator-free islands in D. o. Conservation Causes of low reproductive success of translocated Takahe . Observations on the

breeding behaviour of the Takahe (em class . Low reproductive success of the endangered Takahe *Porphyrio mantelli* on offshore . of translocated takahe (*Porphyrio hochstetteri*) on predator free islands. Variation in inter-territory reproductive success of takahe introduced to predator-free islands. DOC SCIENCE INTERNAL SERIES 151. Ian G. Jamieson and G. A retrospective study of post-mortem examination findings in takahe . Causes of low reproductive success of translocated takahe. (*Porphyrio mantelli*) on predator-free islands. SCIENCE FOR CONSERVATION 125. 2014 Plan for a North Island Meta-population of Takahē *Porphyrio mantelli* *mantelli* BirdLife International (2000) . initiated in 1985, with the aim of raising populations for translocation to predator-free islands. . timing: Past, Likely to Return ? scope: Majority (50-90%) ? severity: Causing/Could cause Low reproductive success of the endangered Takahe *Porphyrio mantelli* on Year 12 Biology Takahe.doc - Moodle Feb 24, 2012 . Nest predation in New Zealand songbirds: Exotic predators, introduced prey and long-term Causes of low reproductive success of translocated takahe (*Porphyrio mantelli*) on predator-free islands. *Sci.
